

LAB(PROGRAMMING FUNDAMENTALS)

Name = Bazil Uddin khan (24K-0559)

Q1 . Ans : 1) Take age, height ,weight as input for student1

2) Take age, height, weight as input for student2

3) Then display the result

Q2 Ans : 1) Take input of distance

2) Check the distance in kilometers or miles

3) If in kilometer so convert into metric measurements by multiplying by 1000

4) If in miles so convert into metric measurements by multiplying by 1609

5) Then display answer in metric measurements

Q3 Ans : 1) Take num1 and num2 from user

2) For addition (+) do num1 + num2

3) For addition (-) do num1 - num2

4) For addition (*) do num1 * num2

5) For addition (/) do num1 / num2

6) Then display the outcome of operation

Q4 Ans :

GIVEN DATA	REQUIRED RESULTS
Student id , student name	Obtained marks
Marks1	Overall percentage
Marks2, Marks3	Student id , student name
PROCESSING REQUIRED	SOLUTION ALTERNATIVES
Obtained marks = Marks1+Marks2+Marks3	1). Can be done by defining the student id and All 3 marks in subject from user.
Overall percentage = Obtained marks/300 * 100	

Q5 Ans :

GIVEN DATA	REQUIRED RESULTS
Length, width	Area
PROCESSING REQUIRED	SOLUTION ALTERNATIVES
Area = length * width	1). Can be done by defining the length and width by taking as input from user

Q6) Ans :

GIVEN DATA	REQUIRED RESULTS
Total time = 150	Total distance
Total speed = 40,000	
PROCESSING REQUIRED	SOLUTION ALTERNATIVES
Total distance = Total speed * Total distance	1). Define total speed and total time by making it constants.

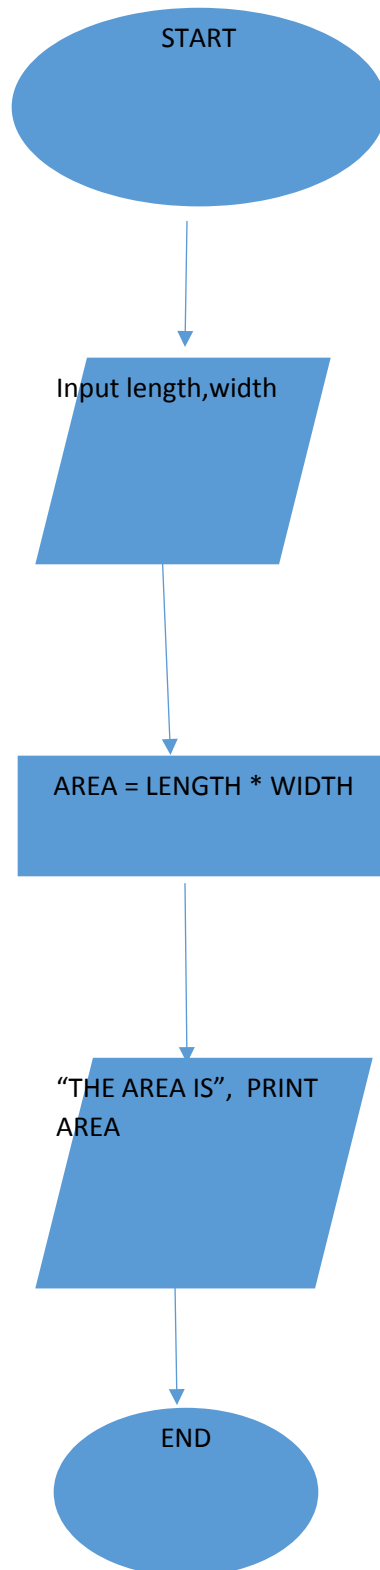

Q7) Ans:

GIVEN DATA	REQUIRED RESULTS
Celsius Temperature	Fahrenheit Temp
PROCESSING REQUIRED	SOLUTION ALTERNATIVES
Fahrenheit Temp = (Celsius temperature * 9/5) + 32	1). Define Celsius Temperature as input from user

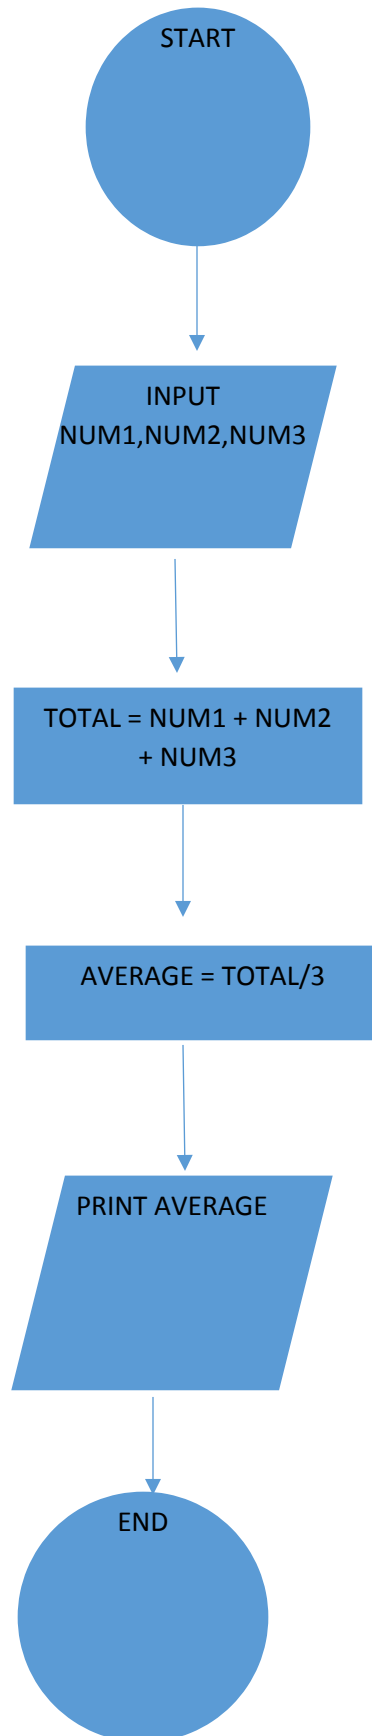

Q8) Ans:

INPUT	PROCESSING	OUTPUT
Monday steps = 8000	1). Add all steps one by one	Average steps
TUESDAY steps = 9500	2). Then determine average by dividing total steps/7	
Wednesday steps = 7500	3). Print Average steps	
Thursday steps = 10,500	4). END	
Friday steps = 6200		
Saturday steps = 8800		
Sunday steps = 7100		

Q9) Ans:

Q11) Ans

Q10) Ans
