Task1,2:

```
1  #include "iostream"
2  #include <string>
3
4  using namespace std;
5
6  class LibraryBook{
7  private:
8      int availableCopies;
9
10     public :
11         std :: string title;
12         std :: string author;
13         long isbnnumber;
14
15
16
17 };
18
```

TASK3,4:

main.cpp	Run	Output
<pre>1 #include "iostream" 2 #include <string> 3 4 using namespace std; 5 6 class LibraryBook{ 7 private: 8 int availableCopies; 9 10 public : 11 std :: string title; 12 std :: string author; 13 long isbnnumber; 14 15 void setCopies(int copies){ 16 availableCopies = copies; 17 } 18 19 int getCopies(){ 20 return availableCopies; 21 } 22 }</pre>		<pre>/tmp/Krfo3aAS5S.o Enter the title of book :THE WORLD Enter the author name of book :RETYUYT Enter the isbn number of book :12345678990 Enter the number of available book copyies :23 Title : THE WORLD Author : RETYUYT ISBN : 12345678990 Available copies : 23 === Code Execution Successful ===</pre>

Code:

```
#include "iostream"
```

```
#include <string>
```

```
using namespace std;
```

```
class LibraryBook{
```

```
    private:
```

```
        int availableCopies;
```

```
public :
```

```
    std :: string title;
```

```
    std :: string author;
```

```
    long isbnnumber;
```

```
void setCopies(int copies){
```

```
    availableCopies = copies;
```

```
}
```

```
int getCopies(){
```

```
    return availableCopies;
```

```
}
```

```
void displayDetails()
```

```
{
```

```
    std :: cout << "Title : " << title << std :: endl;
```

```
    std :: cout << "Author : " << author << std :: endl;
```

```
std :: cout << "ISBN : " << isbnnumber << std :: endl;  
std :: cout << "Available copies : " << availableCopies << std :: endl;  
}
```

```
};
```

```
int main(){
```

```
    LibraryBook bookinfo;
```

```
    std :: cout << "Enter the title of book :";
```

```
    std :: getline(std:: cin,bookinfo.title);
```

```
    std :: cout << "Enter the author name of book :";
```

```
    std :: getline(std:: cin,bookinfo.author);
```

```
    std :: cout << "Enter the isbn number of book :";
```

```
    std :: cin >> bookinfo.isbnnumber;
```

```
    int copies;
```

```
    std :: cout << "Enter the number of available book copyies :";
```

```
    std:: cin>>copies;
```

```
bookinfo.setCopies(copies);
```

```
bookinfo.displayDetails();
```

```
return 0;
```

```
}
```
