2. Project Description :

The Portfolio Website is a personal web application designed to showcase the skills, achievements, and work of an individual. This website will serve as a professional online portfolio for potential employers, collaborators, or clients. It includes sections like an introduction, skills, projects, and contact information, providing a comprehensive overview of an individual's qualifications and work.

3. Project Objectives :

The objectives of the project are:

- To create a professional, visually appealing portfolio website using HTML and CSS.
- To demonstrate proficiency in web design and layout.
- To implement responsive design, ensuring compatibility across devices (mobile, tablet, desktop).
- To highlight the individual's skills and past work with interactive features.
- To provide a simple contact form for inquiries.

4. Reason for Choosing the Topic

The choice to create a Portfolio Website was made because it is a basic requirement for anyone looking to establish an online presence, particularly in the field of web development or design. A portfolio is an essential tool for professionals in creative industries, and this project serves as a demonstration of our skills in web development, particularly with HTML and CSS.

5. Tools, Libraries, and Frameworks Used

HTML5: For the structure and markup of the website.

CSS3: For styling and layout of the website.

Responsive Web Design: Using media queries to ensure the site is mobile-friendly.

Fonts: Google Fonts (optional) for typography.

Icons: FontAwesome (optional) for visual enhancements such as social media icons.

6. Code Structure and Layout

The project consists of two main files:

index.html: The main structure of the website, which includes sections like the introduction, skills, portfolio, and contact form.

style.css: The stylesheet for styling the HTML content, including layout, colors, fonts, and responsiveness.

The layout includes:

A Header section with navigation links.

A Main Content Area that features the introduction, skills, portfolio (project showcase), and a contact form.

A Footer section with contact information and links to social media.

7. Key Functions Implemented

Navigation Menu: A navigation bar to link to different sections of the website (e.g., Home, About, Skills, Contact).

Responsive Design: Ensures the layout adapts based on screen size (mobile, tablet, desktop).

Contact Form: A simple form to allow visitors to reach out for inquiries.

Skills and Projects Section: Interactive cards or lists showcasing skills and past work with brief descriptions and images.

10. **Project Summary**

The Portfolio Website project was been aimed by us to create a representation of individual's professional profile .We used HTML and CSS, this website reflects how different sections like skills, projects, and contact details. The website was designed with responsiveness in mind to ensure it works on all devices.Thus

Results: The website successfully displayed all required sections and functioned well across devices. The contact form was operational, and the design was consistent with the goals set in the objectives.

Challenges: The main challenges faced during the development were ensuring cross-browser compatibility and making the website fully responsive to different screen sizes.
